

Section 8-4: Scale & Scale Factor

Scale Factor:

The # you multiply to one object in order to increase or decrease its size.

This maintains "proportionality."

From C to E: Scale Factor = 2

From E to C: Scale Factor = $\frac{1}{2}$

Important Points:

--Scale Factor is just a #, no units

--Write Scale Factor as a fraction or whole #

Scale:

A ratio that tells you how 2 objects compare in size

example 1 in : 15 miles

--Scale is written as a fraction when working in a problem

example 1 in : 15 miles

A hand-drawn red fraction $\frac{1}{15}$ is shown below the text. The fraction is enclosed in a red oval, and a red line connects the top of the oval to the word "example" in the line above.

In the figure below, the scale factor from A to B is $\frac{3}{1} \rightarrow \frac{1}{3}$

1. Find the length of side BD.

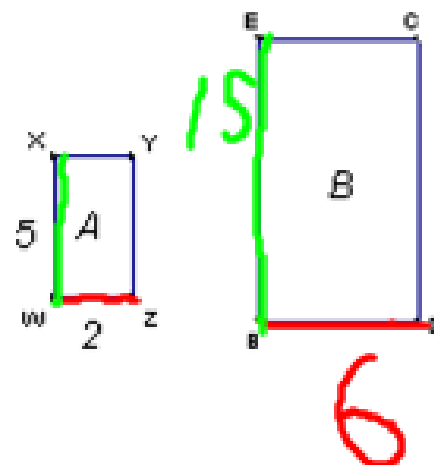

$$2 \cdot 3 = \textcircled{6}$$

2. Find the length of EB.

$$5 \cdot 3 = \textcircled{15}$$

3. Find the scale factor from B to A.

$$\frac{1}{3}$$

Find the scale for the following:

Actual

4. Find model : actual. A house that has a living room with length 16 feet and the blueprint of the same living room has a length of 4 centimeters.

$$4 \text{ cm} : 16 \text{ ft} \xrightarrow{\text{Model}} \frac{4}{16} = \frac{1}{4} \rightarrow \text{1 cm : 4 ft}$$

5. Find actual : model. A person who is 69 inches tall and whose bobblehead is 7 inches tall.

$$\text{69 in : 7 in} \quad \begin{array}{l} \text{Actual} \\ \text{Model} \end{array}$$

6. The scale of a map is 3 inches : 100 miles.
Two cities are 7.5 inches apart on the map.
Find the actual distance between the cities.

$$\frac{3 \text{ in.}}{100 \text{ mi}} \sim \frac{7.5 \text{ in.}}{x \text{ mi}}$$

$$\frac{3}{100}x = \frac{750}{100}$$

$$x = 250 \text{ mi}$$

7. A drawing has a scale of 5 cm : 3 m to the
actual figure. Find the drawing
measurement if the length of the actual
figure is 15 meters.

$$\frac{5 \text{ cm}}{3 \text{ m}} \sim \frac{x \text{ cm}}{15 \text{ m}}$$

$$\frac{5}{3} = \frac{3x}{15}$$

$$25 \text{ cm} = x$$

8. The scale of a map is $\frac{1}{2}$ inch \div 24 miles.

What is the actual mileage between two cities that are 3 inches apart on the map?

$$\frac{0.5 \text{ in}}{24 \text{ mi}} \sim \frac{3 \text{ in}}{x \text{ mi}}$$

$$\frac{0.5x}{0.5} = \frac{72}{0.5}$$

$$x = 144 \text{ mi}$$

9. On a blueprint of a house, the living room is 1 inch long. The actual length of the living room is 24 feet. What is the scale of the blueprint?

$$1 \text{ in} : 24 \text{ ft}$$

10. In the same blueprint for #9, where the living room is 1 inch long and the actual length of the living room is 24 feet, a hallway on the blueprint is $\frac{1}{4}$ inch wide. Find the actual width of the hallway.

$$1 \text{ in} : 24 \text{ ft}$$

$$\frac{1 \text{ in}}{24 \text{ ft}} = \frac{0.25 \text{ in}}{x \text{ ft}}$$

$$x = 6 \text{ ft}$$

11. The picture shown is a scale drawing of a collector car. The scale is $1 \text{ cm} \div 72$ centimeters. How long is the actual full-sized car?

$$\frac{1 \text{ cm}}{72 \text{ cm}} = \frac{6.5 \text{ cm}}{x \text{ cm}}$$

$$x = 468 \text{ cm}$$
